Games & Activities

Stop-and-go dance game

This game requires lots of space for free movement.

Have everyone spread out, at least an arm's length from one another.

One adult stays by the radio or tape/CD player and uses the volume button to signal the starting and stopping of the dance.

When you turn the volume up, the children dance as fast and with as much action as they can.

When you turn the music down, everyone must immediately sit down.

One variation is to freeze in place when the music stops instead of sitting down. Then, when the music starts again, dancing is resumed.

Use different types of music to encourage a variety of dancing—waltzes, rhythmic Latin tunes, country-western and so on.

Turn the music up ... dance ... Turn the music down ... stop or freeze, and so on. Add your own rules and dance a different way. □

Parenting

Providing emotional support

Beyond satisfying toddler's basic physical needs, such as good nutrition and providing a healthy, safe environment, her most important need as a toddler is for a dependable, affectionate relationship with at least one significant adult in her life.

This relationship provides her with the essential element of stability she needs as she moves onward toward higher stages of intellectual, emotional and social development.

It is the secure anchor she needs as she experiences waves of sometimes baffling new experiences.

When Toddler can count on the faithful love of someone special—whether in success or in failure, in

accomplishment or adversity—her feelings of trust and positive self-esteem are nourished and developed.

On the other hand, children who fail to develop this important bond become apprehensive and mistrustful of themselves and others.

One of the great challenges of good parenting is letting your child know she is loved without being either overly protective of her or overly intrusive in her own private world.

It involves being sensitive and responsive to her inner emotional needs, rather than imposing affection on her in ways she does not want.

This demands insight, flexibility and self-control on the part of the parent and, at times may seem almost impossible to accomplish.

Let's face it: It's impossible to be a perfect parent all the time. A more realistic goal is just to strive to be a good parent most—or at least, part—of the time.

Striving to be a good parent involves trying to find a balance—a happy medium—between letting your child go in order to experience independence and holding on to her with affection whenever she needs your emotional support. □

Hands Off

I'm going to add my voice to the chorus of those suggesting that over-doing parents are becoming dangerous to the healthy development of their children. Maybe if you hear it often enough, you will begin to reflect on some of your actions and their effects on your children.

I visited my local preschool the week of St. Patrick's Day. The teachers had planned some imaginative activities to introduce the children to the stories of leprechauns and pots of gold.

After hearing the stories about catching the mischievous leprechaun in order to learn where he had hidden the treasure, the teachers suggested that the children could make their own leprechaun traps.

The children pulled out paper and markers, and began to design their individual traps. There was some lively and creative discussion about what would work, and why.

Since the idea had caught on, the teachers suggested that the kids take their drawings home, and work on making an actual trap to bring back to school the next day.

Looking at the results, I imagine that in some households that night parents put in an all-nighter, devising the most intricate and elaborate devices they could, complete with sparkles and spangles, and mechanical wonders with working parts, and even sounds.

The teachers later shared with me their dismay when they saw parents carrying their marvels into the classroom, with children following along as an afterthought, most looking a bit bemused by all the adult energy that had so completely taken over their original ideas.

And what was the point of all that activity, supposedly on behalf of their children? Maybe it was to play a round of one-upmanship, showing just whose Mom was most willing to devote herself slavishly so that her child could have the "best" on exhibit.

Maybe it was the mistaken notion that the children would learn how to do their own project with such an example, even though such techniques were far beyond the ability or concepts of any preschooler.

Maybe it was because many parents are just too intertwined with the lives of their children to just let them proceed on their own.

I will add that a couple of parents had treated the project as it should have been treated—completely hands-off. Their youngsters came in with ingenious child-like creations, such as a candy glued to a piece of cardboard, with a cup attached to a string that could be lowered as soon as the unsuspecting leprechaun came close to the candy.

And I must say that their confident grins as they explained their ideas spoke volumes of the personal sense of initiative their own ideas and effort had produced.

So, consider again what children lose when their parents insist on:

- Taking over;
- Becoming too involved;
- Showing them the best way to do things, (rather than letting them muddle through on their own);
- Following their own ideas;
- Making their own mistakes, and
- Becoming his or her own person.

Stick your hands in your pockets, folks, and hands off. □

Give children words

The ability to understand words, both written and spoken, is highly valued in our culture. We need to be able to speak and to read to succeed in almost everything we try to do in life.

Since children learn new words by hearing them and by seeing them, parents and caregivers can do much to add to children's vocabularies.

For very young children, this can be done by naming objects that they see and come in contact with every day. Identifying and naming objects does sound a lot like talking to oneself, but it is a worthwhile endeavor.

For example, "This is your *shoe*, and I'm going to put it on your *foot*." "Let's put these *blocks* away in this *can*."

Children need to hear the same words over and over, and this can seem tiresome until you get into the habit of maintaining a one-sided running conversation!

When children begin to talk, they may not pronounce words correctly. Instead of always correcting them, you can simply repeat the word in a sentence, using the correct pronunciation. Once you learn how to talk, it's hard to remember how hard it was in the beginning.

Older children love to hear big words, even though they might not understand what they mean. So, don't be afraid to introduce new and fascination-sounding words in your conversation. "This sandwich isn't just big, it's *stupendous*!" "This ball will roll faster as it gains *momentum*."

Teaching children to be curious about their world—and the words that tell them about their world—can start them on a journey of discovery of their own. □

Disobedience: What not to do

Every parent faces a disobedient child, but a parent's reaction can set the tone for dealing with misbehavior.

"Most of the time children won't want to or can't tell why they've misbehaved," said Peter Stavinoha, a psychologist at Children's Medical Center of Dallas.

"The importance of the situation lies with how the parent reacts."

He suggests three simple guidelines that can help parents effectively deal with disobedient children.

First: Don't lecture. Lecturing a young child gives opportunity for arguments or repeat occurrences.

Children often won't or can't talk about their unacceptable behavior. However, a swift, meaningful consequence makes for clearer learning.

Second: Don't use excessive warnings. Multiple warnings of consequences build delay in a child's response.

If a child is given repeated warnings, she learns that she doesn't have

to act right away. The warning of negative consequences should hold firm on a second command.

Finally: Don't dole out long-term punishment. Make the punishment immediate because if it drags on for a long time, the child may not correlate the punishment with a specific incident.

Also, if a child misbehaves while being punished for one reason, finding a second punishment gets more difficult for the parent. □

Science & Nature

How much does it weigh?

Let's conduct some experiments about how much things weigh.

You'll need a kitchen or bathroom scale on a table along with several interesting objects to weigh: a shoe, toy car, doll, apple, cup, a book, uncooked pasta, and anything else that looks interesting.

1. First, have each person guess how much an object weighs. Then put it on a scale and see what its true weight really is.

2. Next, compare the weights of different objects. Which is heavier: the doll or the shoe? The toy car or the apple? Weigh the objects again to show the difference.

3. If you're using a bathroom scale, put it on the floor and weigh each person who's participating.

Then line up by weight—the lightest to the heaviest. Make some more comparisons: Is the heaviest person the tallest?

4. Which weighs more—big objects or little objects?

Try to think up some "stumpers" such as a jar of peanut butter vs. a sack of potato chips. Or a package of marshmallows vs. a can of soup.

5. Solve this problem: How can you measure the weight of your pet if it won't stand still on the scale? (It's not higher math but is a good problem for older kids to solve.)

If you have more than one pet, which one weighs the most?

6. Liquids have weight, too. Everybody guess how much a gallon of water weighs, then weigh one gallon and find out.

The participants in this exercise will probably have quite a few ideas of their own about what weighs what.

Think up additional problems to solve that match the kids interests and skill levels. □

Something New!

"Grandma Says" is a twice-monthly special message that includes general parenting tips, words of encouragement, and children's book reviews.

To receive your free issues, go to:
www.GrowingChild.com/FreeGrandmaSays
and enter your e-mail address.

You can review a current issue at: www.blog.growingchild.com/the-joy-of-parenting

Growing Together is published by Growing Child, Inc., P.O. Box 2505 W. Lafayette, IN 47996 ©2016 Growing Child, Inc. Telephone: (765) 464-0920. Customer Service: 1-800-927-7289.

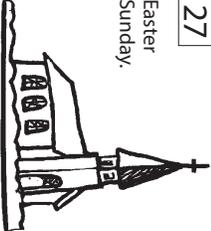

Growing Child also publishes: **Growing Child** (birth-six years), and **Growing Up** (grades K-12).

Growing Together issues may be reproduced in part or in full by participating organizations.

Articles in **Growing Together** refer to both boys and girls. For simplicity, the pronouns "he" and "she" are used interchangeably unless otherwise noted.
